Wine is a recursive acronym that stands for Wine Is Not an Emulator It's been around the Unix world for a very long time, and because OS X is a Unix-based operating system, it works on the Mac too.. It isn't for the faint of heart, although there are instructions online, and some kind souls have set up tutorials, which you can find using Google.. As the name suggests, Wine isn't an emulator The easiest way to think about it is as a compatibility layer that translates Windows Application Programming Interface (API) calls into something that the Mac can understand.. It's called The Wine Project, and the effort continues to this day OS X is POSIX-compliant, too (it's Unix underneath all of Apple's gleam, after all), so Wine will run on the Mac also. 0041d406d9 [Excel For Mac Crashes When Sorting](#)
